

GOAL

Containment Zone Tracking Application Development

CONSTRAINTS

Maintain necessary datas  
access necessary usage of location

COMMENTS

This application is intended to provide information about containment zones in a particular region by alerting people, through continuous monitoring of an individual’s location. Key benefits of the application are monitoring people’s activity and alerting them of their safety movements

TEAM IDEA WORKSPACE

FATHEEM MEERAN S

For the precise use of location and get prior alert messages

We need to access the location while to see the alerted zones

We might face lot of challenges

And they provide correct infos native zones

GNANASEKARAN K

How can we push the notification to the user

If we want to push the notification we need to provide the alerted zones

Can we send the alert messages through App notification

The alert messages should be some interactive

KARTHIKEYAN S

We can send grid type of alert messages

If the person encountered into the marked zones the alert messages are sent via mail

We must develop both web & mobile application for the various kinds of users

User can see the updated alert zones before moving to the destination point

PRIYANKA R

User can share their status as public whether they are affected or not

User must keep updated of their app for better reliable of data

For the affected person profile, user can contact the Emergency services

User can access the nearby pharmacy with limited no of tablets w/o doctor prescription

FAVOURITE IDEAS

Make profit as public to alert nearby user whether they are affected or not?

User can contact the war room service for their Emergency purposes

There is a way to share your location to your saved contacts
